Project Details

Dungun is a coastal district of the Malaysian state of Terengganu. The current hospital is a 92 beds hospital and it is a non-specialist district hospital providing outpatient services and inpatient services. Patients required specialists are referred to in bigger hospital at the City Center of Kuala Terengganu.

The new 110 beds hospital will be replacing the current old hospital and with a more advance & comfortable facilities to serve the local needs.

Solution

The new 110 beds hospital will be serving 155,000 populations in the district of Dungun. The Public Works Department of Malaysia (JKR) required a strong brand which has excellence track records in supplying Malaysia government projects. As the market leader in Malaysia, majority of the St Guchi products are certified & approved by SIRIM QAS, a leading Malaysia certification, inspection & testing body. St Guchi supply fire door, mechanical lock, door closer, hardware accessories & master keying system planning. The project is expected to complete by the first Q1 of 2019.
