

Swedish National Maritime Museums

Project Fast Fact

Location

Stockholm, Sweden

Complete year

1938

Architect

Ragnar Östberg

Operator

The Ministry of Culture

Owner

Swedish government

Feature products

ASSA CLIQ Remote system

ASSA ARX access control system

Challenge

Swedish National Maritime Museums needed a modern security system that would function at all of its venues in Stockholm and Karlskrona.

Besides providing effective access protection to safeguard the museums and artifacts, the systems would need to allow for the speedy evacuation of thousands of visitors in the event of an emergency.

Solution

A security update has been carried out, the electromechanical ASSA CLIQ Remote system and the ASSA ARX access control system have been installed.

ASSA CLIQ Remote allows for keys to be blocked easily, and makes it possible to give a person remote access to a locked facility. It removes the need for a key chain entirely. The ASSA ARX, which features an online reader and contactless tags, allows keys to be issued to only a limited number of staff.

Both systems enable differentiated authorization: significant where there are facilities on the premises to which few people are allowed access.
